

Retell AI Topic 4

Phone Number Provisioning & Inbound Routing

Repository: [shaikhshahid777/retell-ai-topic-4-phone-number-inbound-routing](https://github.com/shaikhshahid777/retell-ai-topic-4-phone-number-inbound-routing)

Loom Demo: <https://www.loom.com/share/47d3c033fcdd469f906556ded41de79a>

Assessment Demonstration Scope

This submission documents the current Retell AI configuration for the Topic 4 assessment, including the Trainee_Sarah_Receptionist voice agent, receptionist prompt, webhook/event configuration, Test Audio validation, and call-log evidence. The real phone-number/PSTN portion is documented separately because the current Retell account requires identity verification for phone-number provisioning.

Current Agent

Field	Current configuration
Agent	Trainee_Sarah_Receptionist
Agent type	Single-Prompt voice agent
Model	gpt-5.6-terra
Voice	retell-Cimo
Language	English (US)
Start speaker	Agent / AI speaks first
Tool	Built-in end_call
Knowledge base	None

Webhook Configuration

Configured endpoint: <https://webhook.site/5f95e2c4-87d3-4114-bf4a-5d9bdb540666>

Configured event types: call_started, call_ended, call_analyzed.

This is an agent-level call-event webhook. It should not be described as a completed inbound PSTN routing test.

Topic 4 Evidence Checklist

Item	Status / Evidence
Voice agent configured	Completed
Receptionist prompt	Configured
Webhook configuration	Configured at agent level
Test Audio	Supporting web-call validation
Webhook deliveries	Capture only if actually received
Retell call log / transcript	Capture after an actual test call exists
Phone number provisioning	Blocked by identity verification in current account
Agent-to-number binding	Not demonstrated

Multi-number routing	Not demonstrated
Real inbound PSTN call	Not demonstrated

Recommended Screenshot Evidence

01-agent-configuration.png - Retell agent page showing Trainee_Sarah_Receptionist, model, voice, language, and AI-speaks-first configuration.

02-agent-prompt.png - Receptionist prompt showing role, objective, response style, and call-handling instructions.

03-test-audio.png - Test Audio panel and Run Test control; capture the live test only after it actually runs.

04-webhook-events.png - Webhook.site showing actual call_started / call_ended / call_analyzed JSON payloads, if received.

05-call-log.png - Retell Call Logs entry for the test call, including status, duration, and call type.

06-call-transcript.png - Transcript for the test call.

07-phone-number-identity-verification.png - Phone Numbers -> Buy New Number -> Identity Verification Required screen, documenting the provisioning blocker.

Loom Demonstration Order

1. Open Trainee_Sarah_Receptionist and show the prompt/configuration.
2. Run Test Audio and speak to the agent briefly.
3. Show the webhook receiver and actual event payloads if available.
4. Show the Retell test call log and transcript if available.
5. Show the phone-number Identity Verification Required screen to document why real inbound PSTN testing was not completed.

Evidence rule: Do not label a Test Audio/web_call as a real inbound PSTN phone call, and do not claim webhook delivery, caller metadata, or telephony logs unless the corresponding evidence is actually visible.
